

Django, Project, App

A project is made of many applications

Django includes built in apps in django.contrib (for authentication, security, serving static files)

We need to create our own apps. The start page suggest we try.

```
gabriel@MacBook-Pro-de-MacBook:~/repos/biopark/django-course2/sample$ python3 manage.py startapp sample_
website
gabriel@MacBook-Pro-de-MacBook:~/repos/biopark/django-course2/sample$ tree .
.
├── db.sqlite3
├── manage.py
├── sample

```

Django, Project, App

- Take a look at settings.py

```
76 DATABASES = {  
77     'default': {  
78         'ENGINE': 'django.db.backends.sqlite3',  
79         'NAME': BASE_DIR / 'db.sqlite3',  
80     }  
81 }
```

Sqlite and others drivers come with Python, so I'll just use that...
