

Projeto5 TO-DO 2:

- Add a url for homepage at <project>/urls.py

```
16 from django.contrib import admin
17 from django.urls import path
18 | from projeto5_website import views
19
20 urlpatterns = [
21 |     # Minha primeira view
22 |     path('', views.home, name='home'),
23 |     path('admin/', admin.site.urls),
24 ]
25 |
```

- Add and view to homepage at <project>_website/views.py

```
1 from django.shortcuts import render
2 | from django.http import HttpResponse
3
4 # Create your views here.
5
6
7 | def home(request):
8 |     return HttpResponse("Beep, Beep, Beeep! I'm alive!")
9 |
```

- Access your web app

Django, #3 templates

- If we want to make a web application, we better build a response that has some HTML
- My application likely has a lot of html that doesn't change (the site design) and some that does
- Most web frameworks include template engines
- Basically HTML + placeholders wich might be code.
- Way to break out big chunks of HTML into Separate files.
