

Django, #5 forms

- Usually website uses forms to achieve data from users;
- Django has to form generating classes: `forms.Form` and `forms.ModelForm`
- The field rendering into html form can be done by the template tags: `form.as_p`, `form.as_li` or `form.as_table`;

Django, #5 forms

- Fields:
 - map data between forms (received as a POST request) and django models;
- Widgets:
 - The visual aspects of each field in form html (e.g. DateField or TextInput for dates);
- <https://docs.djangoproject.com/en/4.0/ref/forms/widgets/>
