

Django, Project, App

- Take a look at settings.py

```
76 DATABASES = {  
77     'default': {  
78         'ENGINE': 'django.db.backends.sqlite3',  
79         'NAME': BASE_DIR / 'db.sqlite3',  
80     }  
81 }
```

Sqlite and others drivers come with Python, so I'll just use that...

Django, Project, App

- Take a look at settings.py (app section)

```
33 INSTALLED_APPS = [  
34     'django.contrib.admin',  
35     'django.contrib.auth',  
36     'django.contrib.contenttypes',  
37     'django.contrib.sessions',  
38     'django.contrib.messages',  
39     'django.contrib.staticfiles',  
40 ]
```

The initial project already has many applications, I've just added the app that we've created a few slides before
