

Django, #5 forms

- Fields:
 - map data between forms (received as a POST request) and django models;
- Widgets:
 - The visual aspects of each field in form html (e.g. DateField or TextInput for dates);
- <https://docs.djangoproject.com/en/4.0/ref/forms/widgets/>

Django, #5 forms

- Use Meta class to easy build forms:

Projeto5_website/forms.py

```
from django import forms
from projeto5_website.models import Pergunta

class PerguntaForm(forms.ModelForm):
    class Meta:
        fields = ['enunciado']
        model = Pergunta
```
