Django, #4 models

·Our first model

Projeto5_website/models.py

```python
from django.db import models

# Create your models here.

class Pergunta(models.Model):
  enunciado = models.TextField(max_length=140)
```

·the attributes of the class are columns in the table
·Django automatically takes care of things like PKs if we
 don't explicitly manage them

Django, #4 models

·Django Creating Migrations

```
gabriel@MacBook:~/projeto5$ python3 manage.py makemigrations
Migrations for 'projeto5_website':
  projeto5_website/migrations/0001_initial.py
    - Create model Pergunta
```

·makemigrations will compare models to fields/ migrations inside database.
